

Biostat STR(R) Generation 3 1000 L - approximately 250-1000 L working volume

Local source PDF | preset sartorius-str-gen3-1000 | compiled 10 September 2026

This PDF is stored inside the GitHub project and records the evidence used by the simulator. It is not a copied vendor brochure or manual. The official manufacturer references below remain the authoritative originals.

Manufacturer: Sartorius

Product-contact material: Plastic / single-use

Working volume: 250 L to 1000 L

Nominal vessel or bag size: 1000 L

Simulation profile: mammalian

Evidence status: Family evidence with derived minimum working volume

Original manufacturer references

<https://www.sartorius.com/en/products/fermentation-bioreactors/single-use-bioreactors/biostat-str-generation-3>

Supports: Generation 3 family scale range and single-use stirred-tank architecture.

Evidence basis

Volume: The 1000 L model/family is source-supported; the approximately 250 L minimum is inferred from the platform turndown pattern and must be checked against the chosen bag configuration.

Material: Disposable S80/Flexsafe polymer bag is the product-contact vessel; the support tank is reusable hardware.

- Standard large STR Generation 3 configurations are primarily cell-culture oriented; the simulator uses a generic mammalian stirred-tank profile.

Record note

This source PDF is paired with the detailed HTML provenance record in the same repository. Simulator-specific defaults and derived assumptions are listed there.
