

Thermo Scientific™ DynaDrive™ Single-use Bioreactor 5 L

Local source PDF | preset thermo-dynadriv-5 | compiled 10 September 2026

This PDF is stored inside the GitHub project and records the evidence used by the simulator. It is not a copied vendor brochure or manual. The official manufacturer references below remain the authoritative originals.

Manufacturer: Thermo Fisher Scientific

Product-contact material: Plastic / single-use

Working volume: 500 mL to 5 L

Nominal vessel or bag size: 5 L

Simulation profile: mammalian

Evidence status: Mixed: nominal scale sourced; minimum working volume estimated

Original manufacturer references

1. Thermo Fisher Scientific - DynaDrive Single-Use Bioreactors

Open official manufacturer source online

<https://www.thermofisher.com/fr/fr/home/bioprocessing/products/bioreactors/single-use-dynadriv.html>

Supports: DynaDrive family sizes, working-volume turndown and single-use BPC architecture.

Evidence basis

Volume: The 5 L model is source-supported. The 0.5 L minimum is a simulator estimate because a complete public turndown specification was not captured.

Material: Disposable BPC is the product-contact vessel. Stainless-steel frame/jacket fields on catalogue pages describe support hardware.

- DynaDrive is represented with a generic mammalian stirred-tank profile unless model-specific values are explicitly stored.

Record note

This source PDF is paired with the detailed HTML provenance record in the same repository. Simulator-specific defaults and derived assumptions are listed there.

Copyright and trademarks in the linked manufacturer documentation remain with the respective vendor.
